BUSINESS MOBISTORE

MOBISTORE - MOBILE SHELVING

Stortec MobiStore is a centralized archiving storage shelving system that utilizes the minimum floor space and increases the room storage capacity by at least 75% compared to static shelving. Shelving moves along tracks and eliminates the need of aisles between the racks which now can be used as storage space, its movement is ergonomic and can be either mechanical or electrical. It is a custom-made system designed accordingly to each room specific dimensions and complexity in order to offer the maximum space utilization. The electrical version of the MobiStore can be connected with the Stortec specialized Document Management Software, where every document movement is monitored and controlled, in this way the risk of documents misplacement and valuable data loss is significantly reduced.

The Stortec MobiStore offers:

■ Space Savings

By moving the rack along tracks Stortec MobiStore eliminates the need of aisles between the racks as it requires only one aisle to operate all the rack units, by moving the units existing aisle closes and a new one opens exactly where is needed. In this way the space used for aisles between the racks is now utilized as a storage space, increasing the storage capacity by at least 75% or reducing the floor space used to accommodate the same volume of documents by at least 45%.

Increased Productivity

Centralises all your archives and storage into one area rather than having it spread around the office, allowing you to have more control over your documents and enable you to spend more time on important tasks and less time searching for critical information supplies around the office.

■ Movement Ergonomics

MobiStore movement can be either mechanical or electronic. With the mechanical system, regardless of length, operator can move a single or multiple rack units at the same time easily and effortlessly. Mobile units are equipped with an eraonomic waist-height handle and the movement is transmitted trough reduction gear chain drive (gear ratio 1:5.600kg) to a full-length drive shaft moving all drive wheels throughout the carriage. Electronic drive is a computerised drive system that opens the desired aisle at a click of a button, it is suitable at workplaces where frequent access is required or for very large systems. The main colour touchscreen control panel on the first rack opens the required aisle immediately by moving all racks at the same time, each mobile unit has its own engine and control panel.

Security & Control

Instead of aisles of unprotected open shelves and drawer cabinets, documents are kept clean and secure within the system. Optionally equipped with lockable sliding doors and movement locks, locking the system completely or a certain area of the system preventing unauthorised personnel accessing system contents. With the system of electronic drive, access PIN code and access riahts can be incorporated. Furthermore every document or item movement can be monitored and controlled though the password protected Stortec specialized Document Management Software (optional), which in addition the function of retrieval and return is transformed to a guided job that significantly eliminates transactions errors.

Mobility

Unlike similar systems in the market MobiStore can be installed on the floor in three different ways, either with tracks fixed on the floor accompanied with rail ramps, fixed directly into the floor or, installed with Stortec Floating System which enables the installation of the system without any interference to the

floor as no anchoring is required on the floor. Practice showed that many systems are added or relocated within approximately three years of installation, with Stortec Floating System you can plan ahead with confidence as the system can move along with you without leaving any visible markings to previous installation place.

Flexibility

Stortec MobiStore is a custom -made solution designed and produced to adapt room specific dimensions in order to utilise all available space and offer maximum capacity not limited to that can be modified and extended to meet customers future expansion needs. It can accommodate a wide ranae of documents and items such as Boxes, Audio Visual Materials, Office Supplies, Medical Supplies, Vertical or Lateral Hanging Folders, Lever Arch Files/Box Files, Vertical or Lateral Stand-Up Folders, CDs, Tapes & etc. according to customer needs.

Safety

Stortec ensures maximum safety to the operators by incorporating in track anti-tip mechanism, corridor protection handle to keep the corridor in use open, rubber buffer stops between the mobile units to protect operators fingers and prevent units collision. Additionally the electrical drive system uses threshold safety switches at critical system areas, protection photocells in each aisle and an emergency stop switch at the front of each mobile unit

Fast Return on Investment

Stortec MobiStore is an affordable system that won't break the budget. Due to the space savings and improved productivity provided by a MobiStore System the average ROI is less than eighteen months after systems installation.

COLOUR TOUCH SCREEN CONTROL SYSTEM

MECHANICAL MOVEMENT

Stortec MobiStore Features:

- All steel construction.
- Finished with Power Coating Technology, available at any RAL scale colour – Standard Colour combination RAL 7039 & RAL 7035.
- Decorative Panels for Closed end Uprights.
- Open or Closed Intermediate Uprights.
- Self Locking Shelves capable of re-levelling at every 30mm without the use of any tools, bolts or nuts, Plain, Reinforced or equipped with Hanging Rails.
