BUSINESS ROTOSTORE

STORTEC INTERNATIONAL LIMITED

# ROTOSTORE - VERTICAL CAROUSEL

Stortec RotoStore is an automated storage system where documents are kept at a click away from the user in an ergonomically correct, highly productive manner. It utilizes less floor space compared to conventional filing systems, by using all available vertical height up to the ceiling. No need for bending or stretching to get the documents from the system as everything is delivered at an optimum working level height, effortlessly and right on time. Through Stortec specialized Document Management Software developed for the RotoStore every document movement is monitored and controlled, eliminating misplacement of documents and valuable data loss.

## The Stortec RotoStore offers:

- **Increased Productivity**  
By operating on the principle of archives to the operator rather than man to archives, at a click of a button delivers the documents to the operator and in this way dramatically eliminating operator walk and search time. With the RotoStore one person can carry out the filing activities of 2.6 persons.
- **Ergonomics**  
RotoStore presents the desired archives to the operator at the retrieval opening located at an optimum height, in this way eliminates operator waste of physical effort on ladder climbing, bending down or reaching up to pick from multiple levels and pull out heavy file drawers.
- **Space Savings**  
The system utilizes all available space up to the ceiling or even installed through the

ceiling, RotoStore dramatically reduces the amount of floor space otherwise devoted to conventional filing solutions and, increases storage capacity by 60%.

- **Accuracy**  
With the use of the optional Stortec specialized Document Management Software (DMS), the documents retrieval and return is transformed to a paperless and pick to light job, that eliminates documents transactions errors. Transactions accuracy is improved to 99+%.
- **Flexibility**  
Stortec RotoStore can be designed to accommodate a wide range of documents such as Vertical or Lateral Hanging Pockets, Lever Arch Files/Box Files, Vertical or Lateral Stand-Up Folders, CDs, Tapes & etc. according to customer needs.
- **Security & Control**  
Unlike aisles of unprotected open

shelves and drawer cabinets, documents are kept clean and secure within the system. Doors are lockable and access is monitored and controlled through the password protected Stortec specialized Document Management Software (optional), preventing unauthorised personnel from accessing system contents.

- **Safety**  
Stortec ensures maximum safety to the operators by using threshold safety switches at critical system areas, emergency stop switches at both sides of the system and accident protection photocells at the retrieval opening.
- **Fast Return on Investment**  
Practice proved that the increased efficiencies offered by the RotoStore usually enable organisations to recover their investment within the first twelve months of the system operation.

## Stortec RotoStore Features:

- Electronic Controls at an easily accessible location under the Retrieval Opening Reference table.
- Ergonomic Reference Table (Work Top) of 273mm depth.
- Efficient Lighting System on top of the Systems Retrieval Opening.
- A full Safety System of upper and lower photocell beams and upper and lower mechanical bars together with emergency stop switches at both sides of the system.
- Lockable Sliding Doors at the Retrieval Opening.
- Functional Keyboard, that allows users to move the shelves up and down, enter the desired shelf number to retrieve and communicate with the interfaced PC.
- Optional Coloured Touchscreen Advanced Control Keyboard.

- Fully interfaceable with a PC directly or through LAN when equipped with the Advanced Control Keyboard.
- Stortec Specialized Document Management Software - DMS (optional), offers increased productivity, accuracy, security and control over documents movement.

- Index LEDs at the inner edge of the Reference Table (pick to light), when connected with DMS.
- Three stage progressive imbalance indicator and protection system (warning, safe mode & pause).
